

The mysterious world of bats

Subjects completed the classes:

- Characteristics of bats species: native and worldwide - special features; adaptation to life
- Discuss the life cycle of bats
- The acquaintance of the participants with the role that bats play in nature
- Presentation of the outline of the research on bats with proposals how to engage in the protection of these mammals

comment:

Participants listened with great interest and actively participated in the discussion. Some people who had direct contact with bats, therefore these classes brought back their memories. The classes had a positive effect on the audience- therefore they notice the bats as an important part of the ecosystem.
